SMART AND SAFE ROADS:

THE ROLE OF VEHICLE RESTRAINT SYSTEMS

International Conference on Road Safety
Second Edition

CONFERENCE OVERVIEW

The main issue of the second edition of the International Conference on Road Safety - organized by AISICO and the European Union Road Federation (ERF) - is to analyse how road restraint systems are evolving to face an ever growing demand for safety in a world that is moving towards smart roads.

The conference will be organized in 3 sessions.

- The first will deal with “Safety Regulatory Standard” and on how they should change to meet smarter road requirements.
- The second will involve National Road Authorities to highlight what they have in store and are planning for the next future.
- The third will be dedicated to Manufacturers and Suppliers to know which are their technical updates and most advanced solutions to provide safer roads.
